

Week 6: Auth Flow Screenshots

1. Registration form and success response

[Placeholder for Registration Screenshot]

(The user registers with an email and password. The backend responds with 201 Created and saves the user in the database with a bcrypt hashed password.)

Week 6: Auth Flow Screenshots

Week 6: Auth Flow Screenshots

3. Attempting to access a protected route without login (redirected)

[Placeholder for Redirect Screenshot]

(User attempts to visit /dashboard or /showcase directly. The React router ProtectedRoute component detects no valid session/token and immediately redirects the user back to /login.)

Week 6: Auth Flow Screenshots

4. Successful OAuth login flow (Consent screen -> Logged in state)

[Placeholder for OAuth Flow Screenshots]

(User clicks "Sign in with GitHub/Google". Redirected to provider consent screen. After authorization, user is redirected to /auth/callback and then to /dashboard as a logged-in user.)

Week 6: Auth Flow Screenshots

5. Rate limit error when hitting login repeatedly (429 response)

[Placeholder for Rate Limit 429 Screenshot]

(User attempts to log in more than 5 times in 15 minutes. The express-rate-limit middleware intercepts the request and returns a 429 Too Many Requests response, preventing brute-force attacks.)
